

The Critics Have Spoken! Disaster Recovery Planning for Communications and Critical Infrastructure

"... is an absolute must have."

"... a scholarly examination of how the vulnerabilities in modern-day infrastructure can best be protected from threats such as terrorism and natural disasters. Authors Leo A. Wrobel and Sharon M. Wrobel, both highly skilled professionals in the field, cover the technologies that can help spread the word quickly when things go wrong, how to set up procedures for "4Ci" (Command, Control, Communications Computers, and Intelligence) the basics of a solid emergency response plan, templates for assessing the weaknesses of everything from hospitals, to power grids, to large business enterprises "first alert" procedures, and more."

"A scholarly, well-researched text featuring cutting-edge, life-saving preparation measures, Disaster Recovery Planning for Communications and Critical Infrastructure is an absolute must-have for disaster recovery planners and experts, and anyone else responsible for planning for worst-case scenarios. Highly recommended."
